STATEMENT

Here to help you grow.

RELIABLE —

| *You can rely on us.*

We arrive when scheduled. We complete every application accurately and efficiently. Our clients know they can depend on us when it matters most. We value clear communication, consistent service and attention to detail.

CAPABLE —

| *You can trust us.*

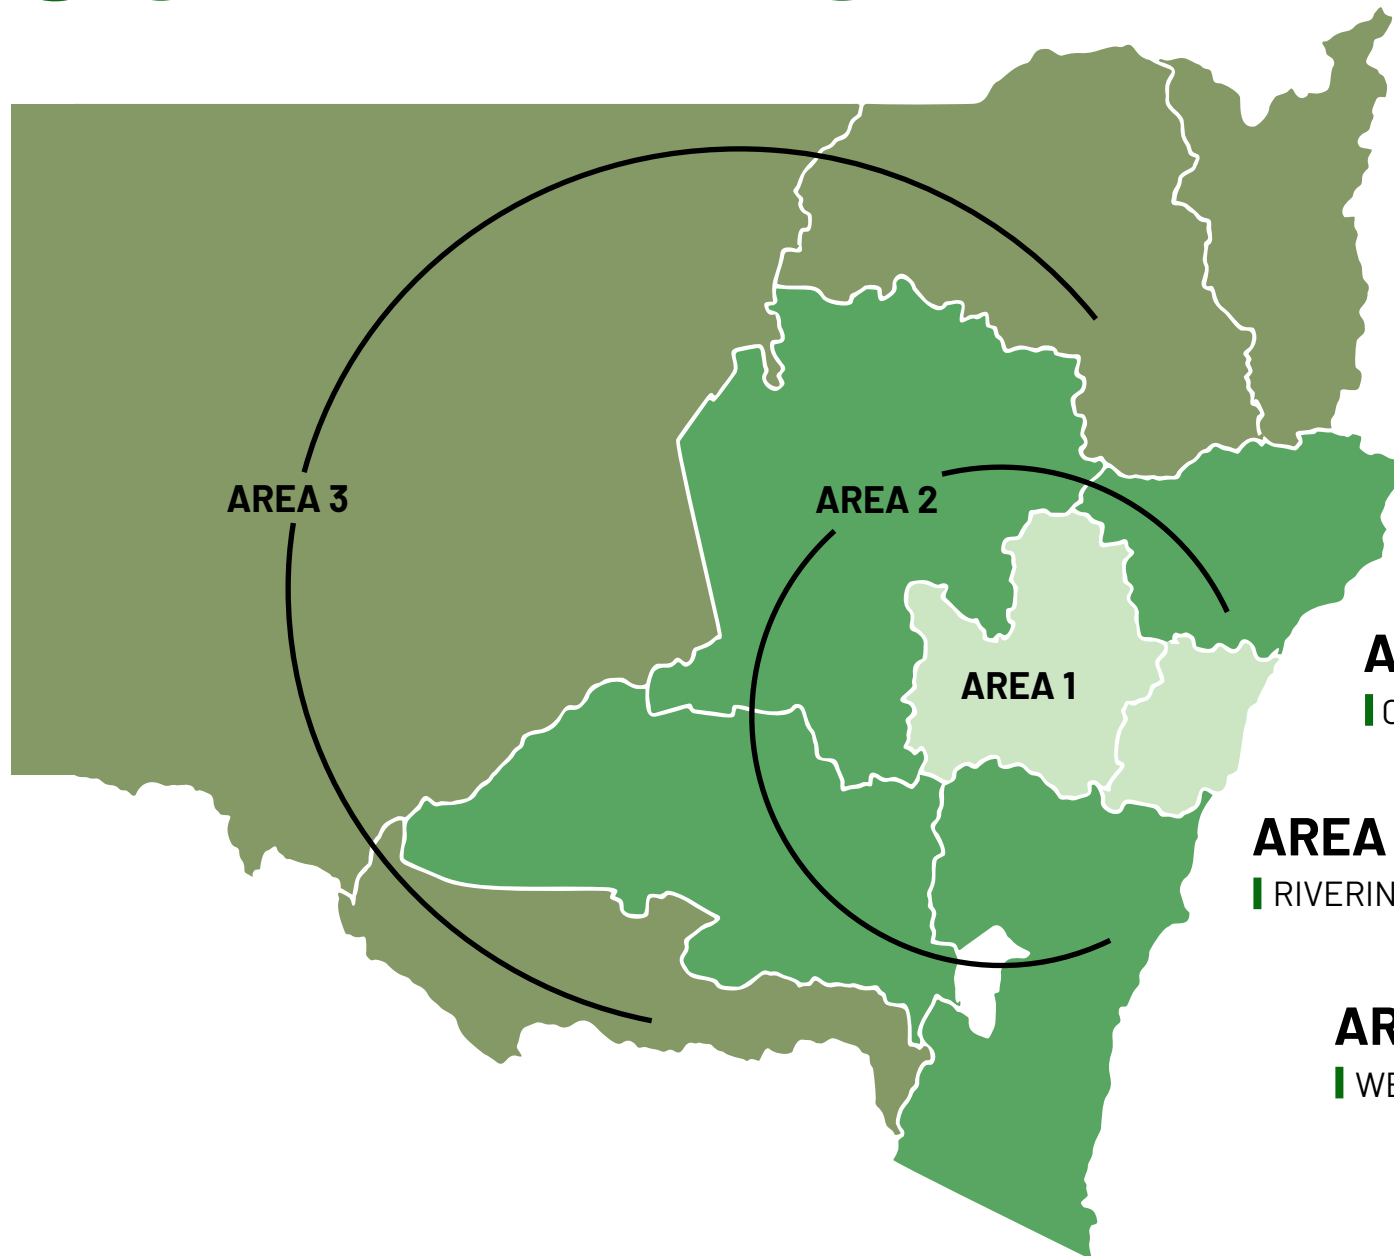

We continually invest in our people, technology and industry relationships to ensure every application is completed with precision and confidence. Whether it's a routine operation or a complex program, we will get it done.

SUSTAINABLE —

| *You can count on us.*

Efficient resource management allows us to maximise the return on every input to support the long-term productivity of your enterprise. By operating sustainably ourselves, we remain a dependable partner for years to come.

OUR AREAS

We will travel anywhere in NSW if the job is *big* enough.

This map gives you an idea of where **JW WALKER** are in relation to your property.

AREA 1

| CENTRAL TABLELANDS, GREATER SYDNEY

AREA 2

| RIVERINA, CENTRAL WEST, HUNTER, SOUTH EAST

AREA 3

| WESTERN, MURRAY, NORTHER TABLELANDS

OUR EXPERIENCE

We are comfortable working on all soils, with all crops, in all conditions. However, if we feel that a paddock is too wet to work we will advise you immediately and propose a new date for completion.

It's always better to wait a couple of days instead of risking it and spending a week fishing equipment out of a paddock.

Weight: 7,800kg

GPS: AEF ISOBUS

Lift Cap: 2,352kg (800mm ahead of pivot)

CROPLANDS

| PINTO 4000

Cap: 4,000L

Diaphragm Pump: 160L/min

Boom Width: 24.5m

IVECO

| TRAKKER + T8

HP: 360

Spread Widths:

55m (SSP) / 22m (lime) / 18m (Gyp)

ASC-10 Spreader Controller

CASE STUDY

| Stirling Park, Cowra NSW

This highly-regarded 250ha mixed-farming operation consists of eighteen broadacre and grazing paddocks. The scenario below is illustrative of our ability to adapt and leverage our network to ensure the job gets done.

CONTEXT

- | Upcoming weather event will limit paddock access, staff and contractors unavailable.

OBJECTIVES

- | Apply lime to adjust soil pH
- | Apply herbicide to remove weed burden

PURPOSE

- | Prepare paddocks for sowing
- | Maintain paddock quality

SERVICES PROVIDED

- | SPRAYING
- | SPREADING

HOW WE HELPED

Applied lime to several paddocks ahead of ploughing to incorporate.

After spreading, other paddocks received a selective or non-selective herbicide to manage weeds.

We were notified that the sowing contractor was unavailable, and a replacement was unable to be found at short-notice.

We contacted a reputable contractor in our network who was able to establish the desired mixed pastures.

RESULT

All required inputs were spread and sprayed within the timeline, and at-risk pastures Stirling Park needed were established successfully.

TESTIMONIALS

"We use **JW WALKER** when the pressure is on, usually to beat an upcoming weather event. They're good communicators with professional equipment, they work well with the staff, including our agronomist, and solve problems that arise on the run. We highly recommend **JW WALKER**."

- JJ Delaney & Sons

"**JW WALKER** have done a terrific job on multiple occasions for our business. They always go above and beyond to solve any issues and get the job done on time. Nothing is ever a problem, they communicate well and have never let us down."

- Tait Pastoral Company
